

ISO 22301:2019

IMPLEMENTATION GUIDE

WHY IS ISO IMPORTANT?

The International Organisation for Standardisation (ISO) is a multi-national organisation that puts forth internationally recognised standards that provide structured frameworks of doing business efficiently and effectively. ISO is an independent, non-governmental organisation, consisting of 164 member countries. ISO was initiated with the idea of answering a fundamental question: "What is the best way to do business?"

The ISO certification mark confirms that your business complies with certified international practices to ensure that your organisation is a reliable and trustworthy service provider, attracting prospective clients and stakeholders.

Customers, regulators, and governments rely on ISO standards to help develop better regulations for businesses in their country. By trusting globally recognised experts to deliver globally agreed upon standards and template frameworks, you can be assured that ISO standards are worth complying to.

ISO Certifications are a means to qualify businesses. This ensures that a certified organisation has a robust Business Management System comprising of Policies, Objectives, Plans, Processes, Procedures, Risk Assessments, Consistent Forms, Templates, and Standardisation. The purpose of standardisation is to streamline production in

various industries, ensuring the quality, consistency, and safety of products and services, while supporting global collaboration and compatibility.

There are many benefits of standardisation for businesses. Customer satisfaction is a key element to success for any business. By complying with various ISO standards, you will ensure that your products and services are delivered at optimal levels of quality. ISO certification is seen as a stamp of approval. By implementing these standards, it increases and streamline productivity, cut costs, and reduce errors.

ISO implementation will aid both short- and long-term business strategies to help a business run smoothly, no matter the size or industry of the business. ISO Management Systems gives every business a competitive advantage over a competitor that does not comply with or implement such a framework in their business. By implementing a Management System that complies with international standards, you will ensure customer satisfaction through quality products and services.

INTRODUCTION

International Standards are long used as a business improvement tool to help drive continual improvement and deliver results in your organization. It is well known that implementation of a Management System transcends well past a piece of paper, and enters the real world as not only being a “stamp of approval” but also an operational tool which results in competitive advantage and an instrument which leverages growth.

Working in hand with the culture of your organisation, Management Systems present a fool-proof strategy to ensure that customer satisfaction, quality, and performance form a solid foundation to your organisation. As technological advantages disrupt industries, and leave many poorly-prepared companies in their wake, the framework provided by these international Standards help predict volatility, and allow you to get ahead of the curve by predicting changing requirements, ensuring your satisfaction levels shift with the tides of change. International Standards are rigid enough to ensure consistent and comparable results, but flexible enough to bend and sway with the requirements of your organisation.

This Implementation Guide will assist you through the process of establishing a Business Continuity Management System (BCMS) in accordance with the requirements of ISO 22301:2019.

NOTE: Specific reference should be made to the [ISO 22301:2019 STANDARD: UNVEILED](#) section of this document.

This guide is laid out to cover the specific requirements of each clause of the Standard, to give additional detail and provide direction. Specific tips have been included, in addition to clause descriptions, to ensure that your establishment and implementation process runs as smoothly as possible. It is also important to note that many Management Systems are closely related and may share the same requirements. Although the clause structure may appear identical, there are multiple technical, legal, and other requirements that must be met to be certified.

Furthermore, as this guide does not contain the text of the ISO 22301:2019 Standard, users are recommended to obtain a copy from their national standards body or from ISO, either directly via sales@iso.org or via the Internet from www.iso.org.

Quality is never an accident; it is always the result of high intention, sincere effort, intelligent direction, and skilful execution; it represents the wise choice of many alternatives.

- *William A. Foster*

KNOWLEDGE

ISO 22301:2019 STANDARD: UNVEILED

Implementation Guide

These state-of the-art templates enable your company to utilize robust and effective processes to develop and implement business continuity plans and assess your company's current ability to meet business continuity needs and obligations. Based on a structure which allows for threat detection, recovery from disruptive events, and managing unforeseen events – these templates utilize multiple avenues to ensure focused results. The multiple benefits of utilizing templates for ISO 22301:2019 include continuity of business operations, use of full-bodied response and recovery procedures, reduced legal and financial exposure, as well as improvement in internal processes. As business continuity is an ongoing concern with far reaching consequences, the fundamental documentation included in these templates will ensure that every avenue is taken into consideration. With concentration on best practice principles, measurement of performance and effectiveness, in-depth monitoring and evaluation, these templates will allow your company to meet and exceed expectations. Alleviating your administrative burden and frustration regarding often difficult to interpret clauses and expectations – these templates offer a unique advantage by being adaptable to your company's size and industry. These templates allow you to take full advantage of the framework to provide consistent and reliable results – with a competitive edge.

Purpose of Toolkit

Building a Management System from the ground is a daunting and daring task – yet it is the cornerstone of every successful certification process. We have assisted various organizations to achieve certification to a range of Standards – showcasing our expert ability to provide direction and support. Our WWISE ISO Experts have spent many years perfecting, streamlining, and updating our templates to ensure your company can implement ISO 22301:2019 in-house, with practiced guidance and support.

These templates are formulated to integrate seamlessly with any existing Management Systems – and present a simple, effective, and fully-covered approach to compliance. These templates contain effective tools to simplify the implementation process and demonstrate the effective operation of your Business Continuity Management System.

Designed to save time and effort in the preparation and processing of the Standard by providing fully-fledged documentation – simply providing the assistance of a Consultant, without their presence!

Additional Information

Text:

- Green text are examples only.
- Red text are guidelines which require to be replaced with the correct information.

Document Type and Numbering:

- Document Type is to be determined by the following conventions:
 - POL – Policies
 - PF – Process Flows
 - PRO – Procedures
 - FT – Forms and Templates
 - WI – Work Instructions
- Document numbering is to be in sequential order, with the following convention:
 - (Document Type-Sequential Number) e.g. The first Policy will be labelled POL-001.

Corporate Identity (CI) Manual:

- Your company should have a document in place mandating the following:
 - Naming (exclusive company name)
 - Logo
 - Color palette (color)
 - Corporate font
 - Business card
 - Letterhead
 - Envelop

Logo:

- The Logo is to be placed in the header box (top right-hand corner) of the Word page.
- This image is to be taken as it stands in the Corporate Identity (CI) Manual.

Clause 1: Scope

This section outlines the scope of the Business Continuity Management System (BCMS). This must be consistent with your business continuity policy. The intended outcomes should enhance business continuity performance and fulfil compliance obligations.

Clause 2: Normative References

Normative reference for ISO 22301:2019 – ISO 22300:2018 Security and Resilience – Vocabulary. This Standard contains additional information which will assist the user in determining if their organisation complies with the requirements of the Standard.

Clause 3: Terms and definitions

This section explains any relevant terms and definitions. It should be noted that the terms and definitions given in ISO 22300:2018 apply but are superseded by the terms and definitions listed in the ISO 22301:2019 Standard.

Clause 4: Context of the organization

This section is responsible for detailing the general requirements mandated for a BCMS. Within this, an understanding of your organisational context is required. As expected, business continuity issues that may affect your organisation are largely dependent on size and industry. The needs and expectations of interested parties who could influence business decisions must also be considered. Through consideration of the context of the organisation, which covers the internal, external, and business continuity context, all direct and indirect consequences because of business continuity interaction are to be determined. Effective and efficient responses to events which disrupt activities is acquired through the BCMS solution and will ensure that delivery of products and services at an acceptable level regardless of the disruption.

Implementation documentation:

- BCMS Overview
- Legal, Regulatory and Contractual Requirements
- Legal, Regulatory and Contractual Requirements Procedure
- List of Internal and External Issues
- Strategic Plan
- List of Interested Parties
- Overall Process Sequence and Interaction
- BC Context of the Organization Procedure

Clause 5: Leadership

This section is responsible for determining the involvement of top management in the BCMS. Top management is required, by the standard, to demonstrate leadership and commitment to the BCMS. This leadership and support are best shown through the roles, responsibilities, and authorities top management must define. A business continuity policy is also required to be signed off by top management to demonstrate commitment to business practices that will not cause harm to employees, as well as legal and other requirements as stipulated. From these employees, ISO Champions are to be selected for the system, and are expected to protect workers from harm by determining what resources are required to keep individuals safe.

Implementation documentation:

- Business Continuity Policy
- Executive Support Letter
- Meeting Minutes Template
- Top Management Communication Programme
- Roles, Responsibilities and Authorities

Clause 6: Planning

This section of the Standard emphasises the importance of having resources in place to ensure the intended outcome(s) of the BCMS are achieved – this is attained through risk identification and analysis. In addition to this, the role of risks and opportunities, as well as how these risks and opportunities will be identified and planned around regarding the BCMS. Legal requirements are also to be determined to ensure your company addresses specific actions. The setting of objectives and planning to achieve them must also be defined. In addition to this, it should be noted that ISO 22301:2019 is based on the “Plan-Do-Check-Act” (PDCA) cycle.

Implementation documentation:

- Risk Assessment and Treatment Process
- Risk Assessment Report
- Risk Treatment Plan
- List of Objectives

Clause 7: Support

This section relates specifically to the resources used and needed by the BCMS, as well as communication and documentation. As for human resources, adequate assessment of competence, training, and BCMS awareness must be demonstrated. The control of documentation relevant to the BCMS is also determined. Internal and external communication relevant to the BCMS is also to be determined.

Implementation documentation:

- Business Continuity Awareness Presentation
- Business Continuity Communication Plan
- Competence Development Questionnaire
- Procedure for the Control of Documented Information

- ISO22301 Benefits Presentation

Clause 8: Operations

This section determines how the control of operations will be planned for. For operations with a significant business continuity impact, written processes should be established. It should be specifically noted that these processes must incorporate the solutions identified in clause 6. Emergency business continuity situations must also have plans and response measures in place.

Implementation documentation:

- Project Initiation Document
- BCMS Documentation Log
- Competence Development Report
- Business Continuity Test Report
- Business Impact Analysis Tool
- Business Impact Analysis Report
- External Contact List
- Business Continuity Procedure Evaluation Checklist
- ROAT Tool
- Business Continuity Contact Log
- Incident Impact Information Log
- Post Incident Report
- Plan Activation Log
- Incident Response Action Log
- Message Log
- Internal Contact List
- Business Continuity Management Plan
- Business Continuity Plan
- Business Continuity Strategies and Solutions
- Business Continuity Exercise Programme
- Business Continuity Test Plan
- Competence Development Procedure
- Business Impact Analysis Process
- Supplier BC Evaluation Process
- Standard Operating Procedure
- Incident Response Procedure

Clause 9: Performance evaluation

This section determines how BCMS processes (and legal requirements) will be monitored, measured, analysed, and evaluated to ensure compliance. With internal audits, problems and corrective measures will be determined. Furthermore, management must review the BCMS to ensure its continuing suitability and adequacy. Management must also determine that the BCMS is being used effectively. BCMS are implemented to ensure your organisation will be able to respond to disruptive incidents timeously and continue deliver of products and/or services at an acceptable level.

Implementation documentation:

- Internal Audit Plan
- Procedure for Management Review
- Procedure for Internal Audit
- Internal Audit Report
- Internal Audit Schedule
- Internal Audit Action Plan
- Management Review Meeting Agenda
- Internal Audit Checklist
- Process for Monitoring, Measurement Analysis and Evaluation

Clause 10: Improvement

As for most ISO standards a commitment to continual improvement is important. This section relates specifically to non-conformities that are to be addressed, along with their corresponding corrective and continual improvement actions. Improvement relies heavily on identifying potential issues and using these opportunities to progress processes and reduce business continuity impacts.

Implementation documentation:

- Procedure for the Management of Non-conformity
- Non-conformity and Corrective Action Log

CERTIFICATION PROCESS

Any organisation wishing to become ISO certified, needs to implement, and maintain an ISO Management System. The Steps that are recommended for an organisation to become ISO certified are as follows:

Step 1 – Gap Assessment

Why do organisations need gap assessments?

- To understand the organisation's current conformance to the ISO Standard of their choice.
- To identify the relevant documentation and records the organisation might already have which are aligned to the standard and identify how to map it to the ISO Standard's requirements.
- To indicate the amount of work required to conform to the ISO standard and to comply to legal requirements.

What are the outputs of the Gap Assessment?

- A Gap Assessment report indicates the current conformance to the standard and the performance of its Management System.
- An obligation free proposal to assist the organisation in closing the identified gaps to conform to the standard with a project plan for implementation and preparation for certification.

Step 2 -Closing Gaps

- Gaps are closed from a documentation and governance perspective according to the standard.
- Awareness Training for all Staff on the importance of ISO, the benefits of ISO certification and the requirements required per role/ individual in the company.
- Information is gathered to understand the respective roles, responsibilities, processes, and procedures.
- Templates for all documentation are standardised and aligned to the corporate identity.
- The Management system is documented and aligned to the standard's requirements.
- Risk management and the specific plans aligned to the standard are focused on and forms are created to collect data to generate Statistics.

Step 3 – Implementation of the ISO Management System

- ISO management system documentation are implemented and records of at least 3 – 6 months are generated.
- On the job training and Workshops on how to use the management system are conducted.
- Internal audit training and maintenance training are conducted to ensure skills transfer.
- Internal audits (dress rehearsals) are conducted with workshops on non-conformances, corrective actions, the updating of risk assessments and the management system if required.
- A management review is conducted. During the management review an action plan is created to ensure all items, either capital or operational expenditure, are managed and documented.

Step 4 – Certification

Key points to consider when choosing a certification body:

- Is the Certification Body accredited? Logos to look out for are: South African National Accreditation System (SANAS), United Kingdom Assurance Services (UKAS), International Accreditation Forum (IAF), Deutsche Akkreditierungsstelle (DAkkS) and many more.
- There are multiple certification bodies globally, it is important that the certification bodies are accredited and being audited by an accreditation body as mentioned above. This ensures credibility of the certification body and respective clients would want to note that the certification was not attained through the internet or purchased, as each certification body is audited by an accreditation body to the ISO 17021 standard.

Who are the different certification bodies?

- | | |
|-------------------------------------|--|
| • British Standards Institute (BSI) | • South African Bureau of Standards (SABS) |
| • TUV Nord | • Standard Global Service (SGS) |
| • TUV Rhineland | • Bureau Veritas |
| • TUV Sud | |

What is the difference between Single Site and Multi-Site Certification?

- Single Site Certification –One site/location and its departments (HR, Finance etc) and Processes (Recruitment, Induction, Creditors and Debtors) are audited.
- Multi-Site Certification – Organisations with various sites or offices across the country or world require multi-site certification. The sites are sampled over a 3-year period. The Initial Stage 2 audit will be conducted for all sites.

MAKING YOUR MANAGEMENT SYSTEM WORK FOR YOU

- Top management commitment is key to making this a success.
- Engage the whole business with good internal communication.
- Keep staff informed of what's going on, create a team or assign a champion, as this will increase motivation. This could include a well communicated plan of activities and timescales.
- Motivate staff involvement with training and incentives.
- Think about how different departments work together to avoid silos. Make sure the organization works as a team for the benefit of customers and the organization.
- Review systems, policies, procedures, and processes you have in place – you may already do much of what's in the standard, and make it work for your business.
- Speak to your customers and suppliers. They may be able to suggest improvements and give feedback on your service.
- Train your staff to carry out internal audits. This can help with their understanding, but it could also provide valuable feedback on potential problems or opportunities for improvement.
- Get customer and supplier feedback on current quality management.
- Establish an implementation team to get the best results.
- Map out and share roles, responsibilities and timescales.
- Motivate staff involvement with training and incentives.
- Share knowledge and encourage staff to train as internal auditors.
- Regularly review your system to make sure you are continually improving it.

We are what we repeatedly do. Excellence, then, is not an act, but a habit.

- Aristotle
